### **Abstract**

*Innovation can be considered as the ability to generate and exploit new ideas. An Innovation eco system represents the future growth and development of the economy. This paper tries to analyse this innovation ecosystem in Indonesia. It looks at the Global Innovation Index (GII) which provides a comprehensive innovation performance report of economies of the world. Indonesia with a favourable demographic divide and abundance of resources is on a progressive march towards establishing itself as an innovative nation. This study looks critically on this journey with the GII lens.*

**Key Words:** Innovation, Indonesia, Index, Ecosystem.

**Acknowledgments:** I acknowledge my Institute FORE School of Management, New Delhi for providing me the opportunity to have a first-hand experience of Indonesia and interacting with the Indonesian Academicians. The infrastructural support that is provided is deeply appreciated.
